| Background Information                           |   |
|  | The U.S. Geological Survey (USGS) serves the Nation as an independent fact-finding agency that collects, monitors, analyzes, and provides scientific understanding about natural resource conditions, issues, and problems.   |
|  | The mission of the USGS's Climate and Land Use Change (CLU)<br>Mission Area is to meet the Nation's need for basic geospatial data,<br>ensuring access to and advancing the application of these data and<br>other related earth science information for users worldwide.   |
|  | In 1992, Congress directed the Department of the Interior to establish<br>a permanent Government archives containing satellite remote<br>sensing data of the Earth's land surface and to make these data<br>easily accessible and readily available for study. Residing in the<br>USGS Earth Resources Observation and Science (EROS) Center<br>near Sioux Falls, South Dakota, this collection of information is<br>known legally as the National Satellite Land Remote Sensing<br>Data Archive (NSLRSDA). It is a comprehensive, permanent,<br>and impartial record of the planet's land surface derived from 50+<br>years of remote sensing. U.S. Public Law 102-555 authorizes the<br>USGS to permanently maintain, preserve, and add to our Nation's<br>remotely sensed collections over land areas of the world. Additions<br>to the NSLRSDA are continuously sought and those that meet the<br>NSLRSDA criteria will become part of the permanent archive. |

Mapper (TM) film that has a digital equivalent. This film was created from 1972 to 1992 from the digital signals received from Landsat satellites. The film is either of a 9-inch by 9-inch or 70-millimeter form factor. The film totals approximately two million frames. The approximate volume of the film amounts to 480 cubic feet for the TM collection and 3,700 cubic feet for the MSS collection. Including duplicates, the shelf space occupied by the film totals 5,180 feet.
